

分析学

复分析、共形几何与解析数论

第三卷

R. EverStarine 编写

2026 年 9 月

序言

目录

序言	iii
第一编 基础复分析与正规族	1
第一章 全纯函数与幂级数	3
1.1 复可微与全纯	3
1.1.1 complex derivative	3
1.1.2 Cauchy–Riemann equations	3
1.1.3 holomorphic functions	3
1.1.4 conformality	3
1.2 幂级数	3
1.2.1 radius of convergence	3
1.2.2 termwise differentiation	3
1.2.3 analytic functions	3
1.2.4 holomorphic = analytic	3
1.3 初等全纯函数	3
1.3.1 exponential	3
1.3.2 logarithm	3
1.3.3 trigonometric functions	3
1.3.4 Möbius transformations	3
1.4 局部结构	3
1.4.1 isolated zeros	3
1.4.2 identity theorem	3
1.4.3 local inverse theorem	3
1.4.4 open mapping theorem	3
第二章 Cauchy 理论	4
2.1 复曲线积分	4
2.1.1 piecewise smooth curves	4
2.1.2 contour integrals	4
2.1.3 primitives	4
2.2 Cauchy 积分定理	4
2.2.1 triangle version	4
2.2.2 Goursat theorem	4
2.2.3 simply connected domains	4

2.2.4	primitive criterion	4
2.3	Cauchy 积分公式	4
2.3.1	basic formula	4
2.3.2	derivative formula	4
2.3.3	Cauchy estimates	4
2.4	基本推论	4
2.4.1	Liouville theorem	4
2.4.2	fundamental theorem of algebra	4
2.4.3	maximum modulus principle	4
2.4.4	Schwarz lemma 初步	4
第三章	Laurent 级数、奇点与留数	5
3.1	Laurent 级数	5
3.1.1	annuli	5
3.1.2	Laurent expansion	5
3.1.3	Laurent coefficients	5
3.2	孤立奇点	5
3.2.1	removable singularities	5
3.2.2	poles	5
3.2.3	essential singularities	5
3.2.4	Casorati–Weierstrass	5
3.3	留数	5
3.3.1	residue	5
3.3.2	residue theorem	5
3.3.3	real integrals	5
3.3.4	point at infinity	5
3.4	零点计数	5
3.4.1	argument principle	5
3.4.2	Rouché theorem	5
3.4.3	multiplicity	5
3.4.4	logarithmic derivative	5
第四章	正规族	6
4.1	局部一致收敛	6
4.1.1	compact convergence	6
4.1.2	holomorphic limits	6
4.1.3	convergence of derivatives	6
4.1.4	Weierstrass theorem	6
4.2	正规族	6
4.2.1	definition	6
4.2.2	sequential compactness	6

4.2.3	spherical metric	6
4.2.4	meromorphic families	6
4.3	Montel 定理	6
4.3.1	locally bounded families	6
4.3.2	Montel theorem	6
4.3.3	omitted-value forms	6
4.4	Hurwitz 定理	6
4.4.1	stability of zeros	6
4.4.2	zero-free limits	6
4.4.3	univalent limits	6
4.4.4	applications	6
 第二编 共形映射、拓扑、覆盖与双曲几何		7
 第五章 Riemann 映照定理		9
5.1	单连通区域	9
5.1.1	simple connectivity	9
5.1.2	holomorphic logarithms	9
5.1.3	holomorphic square roots	9
5.1.4	univalent functions	9
5.2	极值方法	9
5.2.1	normalized families	9
5.2.2	normal-family compactness	9
5.2.3	extremal function	9
5.2.4	surjectivity argument	9
5.3	Riemann 映照定理	9
5.3.1	existence	9
5.3.2	uniqueness	9
5.3.3	automorphisms of the disk	9
5.3.4	conformal classification	9
 第六章 Schwarz–Pick 理论		10
6.1	Schwarz 引理	10
6.1.1	Schwarz lemma	10
6.1.2	derivative form	10
6.1.3	equality case	10
6.1.4	disk automorphisms	10
6.2	伪双曲距离	10
6.2.1	pseudohyperbolic distance	10
6.2.2	Möbius invariance	10

6.2.3	geometric interpretation	10
6.3	Schwarz–Pick 引理	10
6.3.1	differential form	10
6.3.2	distance contraction	10
6.3.3	equality case	10
6.3.4	transfer under conformal maps	10
第七章	共形映射的边界行为	11
7.1	横割与素端	11
7.1.1	cross-cuts	11
7.1.2	chains	11
7.1.3	prime ends	11
7.1.4	prime-end boundary	11
7.2	Carathéodory 边界对应	11
7.2.1	Jordan domains	11
7.2.2	continuous boundary extension	11
7.2.3	boundary homeomorphism	11
7.2.4	prime-end formulation	11
7.3	Schwarz–Christoffel 公式	11
7.3.1	polygonal domains	11
7.3.2	interior angles	11
7.3.3	formula	11
7.3.4	parameter determination	11
7.4	矩形与椭圆积分	11
7.4.1	conformal mapping of rectangles	11
7.4.2	elliptic integrals	11
7.4.3	rectangle modulus	11
7.4.4	special-function connection	11
第八章	二连通区域与极值长度	12
8.1	二连通区域	12
8.1.1	annuli	12
8.1.2	standard ring domains	12
8.1.3	classification theorem	12
8.1.4	conformal invariants	12
8.2	环域模量	12
8.2.1	annulus modulus	12
8.2.2	conformal invariance	12
8.2.3	monotonicity	12
8.2.4	degeneration	12
8.3	极值长度	12

8.3.1	curve families	12
8.3.2	admissible metrics	12
8.3.3	extremal length	12
8.3.4	annulus computation	12
8.4	四边形与共形模	12
8.4.1	quadrilateral	12
8.4.2	dual curve families	12
8.4.3	modulus	12
8.4.4	boundary estimates	12
8.4.5	quasiconformal viewpoint	12
第九章	基本群与解析延拓	13
9.1	曲线与同伦	13
9.1.1	paths	13
9.1.2	homotopy	13
9.1.3	fundamental group	13
9.1.4	winding	13
9.2	函数芽与解析延拓	13
9.2.1	germs	13
9.2.2	continuation along paths	13
9.2.3	uniqueness	13
9.2.4	maximal analytic continuation	13
9.3	单值性	13
9.3.1	homotopy invariance	13
9.3.2	monodromy theorem	13
9.3.3	multivalued functions	13
9.3.4	$\log z$ 、 z^α 与 inverse functions	13
第十章	Cauchy 定理的拓扑形式	14
10.1	指数与绕数	14
10.1.1	index	14
10.1.2	homotopy invariance	14
10.1.3	index and contour integrals	14
10.2	同伦形式的 Cauchy 定理	14
10.2.1	homotopic curves	14
10.2.2	Cauchy integral theorem	14
10.2.3	primitive criterion	14
10.3	同调形式	14
10.3.1	cycles	14
10.3.2	homology	14
10.3.3	null-homologous cycles	14

10.3.4	topological residue theorem	14
第十一章	覆盖空间与全纯覆盖	15
11.1	覆盖映射	15
11.1.1	covering maps	15
11.1.2	path lifting	15
11.1.3	homotopy lifting	15
11.1.4	deck transformations	15
11.2	全纯覆盖	15
11.2.1	holomorphic coverings	15
11.2.2	exponential map	15
11.2.3	coverings of punctured domains	15
11.2.4	distinction from branched coverings	15
11.3	万有覆盖	15
11.3.1	universal covering	15
11.3.2	fundamental-group action	15
11.3.3	deck group	15
11.3.4	Riemann-surface viewpoint	15
11.4	上半平面与模群预告	15
11.4.1	upper half-plane	15
11.4.2	Möbius transformations	15
11.4.3	$PSL_2(\mathbf{R})$	15
11.4.4	$PSL_2(\mathbf{Z})$	15
第十二章*	统一化定理与共形类型	16
12.1	单连通 Riemann 曲面	16
12.1.1	sphere	16
12.1.2	plane	16
12.1.3	disk	16
12.1.4	三种基本模型	16
12.2	统一化定理	16
12.2.1	theorem statement	16
12.2.2	simply connected form	16
12.2.3	universal-cover form	16
12.2.4	uniqueness of conformal type	16
12.3	双曲型、抛物型与椭圆型	16
12.3.1	conformal type	16
12.3.2	universal covering	16
12.3.3	examples	16
12.3.4	punctures and compact surfaces	16
12.4	平面域的统一化	16

12.4.1	hyperbolic plane domains	16
12.4.2	exceptional parabolic cases	16
12.4.3	Poincaré metric construction	16
12.4.4	后续章节所需的统一化结论	16
第十三章 Poincaré 度量与双曲几何		17
13.1	圆盘上的 Poincaré 度量	17
13.1.1	metric element	17
13.1.2	Möbius invariance	17
13.1.3	Poincaré distance	17
13.1.4	Schwarz–Pick as contraction	17
13.2	双曲测地线	17
13.2.1	geodesics	17
13.2.2	completeness	17
13.2.3	constant negative curvature	17
13.2.4	isometries	17
13.3	圆盘与上半平面模型	17
13.3.1	disk model	17
13.3.2	half-plane model	17
13.3.3	Cayley transform	17
13.3.4	boundary at infinity	17
13.4	一般双曲 Riemann 曲面	17
13.4.1	pullback from universal cover	17
13.4.2	hyperbolic domains	17
13.4.3	conformal invariance	17
13.4.4	monotonicity	17
13.4.5	completeness	17
第十四章 Ahlfors–Schwarz 引理与 Picard 定理		18
14.1	共形度量	19
14.1.1	conformal metric	19
14.1.2	Gaussian curvature	19
14.1.3	pullback metric	19
14.1.4	completeness	19
14.2	Ahlfors–Schwarz 引理	19
14.2.1	curvature comparison	19
14.2.2	Schwarz–Pick generalization	19
14.2.3	complete-metric form	19
14.3	正规族与省略值	19
14.3.1	omitted values	19
14.3.2	normality	19

14.3.3	compactness	19
14.3.4	generalized Montel theorem	19
14.4	Picard 小定理	19
14.4.1	covering-space proof	19
14.4.2	omitted values	19
14.4.3	applications	19
14.5	Picard 大定理	19
14.5.1	essential singularities	19
14.5.2	big Picard theorem	19
14.5.3	comparison with Casorati–Weierstrass	19
14.6*	曲率方法	19
14.6.1	nonexistence of negative-curvature metrics on $\mathbf{C}$	19
14.6.2	Liouville-type results	19
14.6.3	Brody-type ideas	19
14.6.4	hyperbolicity 的现代入口	19

第三编 调和函数与势论 21

第十五章 调和函数与次调和函数 23

15.1	调和函数	23
15.1.1	Laplace equation	23
15.1.2	mean-value property	23
15.1.3	maximum principle	23
15.1.4	Harnack inequality	23
15.2	调和共轭	23
15.2.1	Cauchy–Riemann equations	23
15.2.2	local harmonic conjugate	23
15.2.3	simply connected domains	23
15.2.4	holomorphic functions	23
15.3	次调和函数	23
15.3.1	subharmonic functions	23
15.3.2	mean-value inequality	23
15.3.3	maximum principle	23
15.3.4	$\log f $	23
15.4	分布观点	23
15.4.1	distributional Laplacian	23
15.4.2	positive distributions	23
15.4.3	Riesz measure	23
15.4.4	potential-theoretic interpretation	23

第十六章 Dirichlet 问题与 Perron 方法	24
16.1 Dirichlet 问题	24
16.1.1 boundary-value problem	24
16.1.2 disk Poisson kernel	24
16.1.3 Poisson integral	24
16.1.4 harmonic measure	24
16.2 Perron 方法	24
16.2.1 subfunctions	24
16.2.2 Perron family	24
16.2.3 Perron solution	24
16.2.4 uniqueness	24
16.3 边界正则性	24
16.3.1 barriers	24
16.3.2 regular boundary points	24
16.3.3 exterior cone condition	24
16.3.4 Wiener criterion 概览	24
16.4 调和测度	24
16.4.1 representation of solutions	24
16.4.2 conformal invariance	24
16.4.3 probabilistic interpretation 的预告	24
第十七章 Green 函数、Green 域与多连通区域	25
17.1 Green 函数	26
17.1.1 definition	26
17.1.2 uniqueness	26
17.1.3 symmetry	26
17.1.4 conformal invariance	26
17.2 Green 域与抛物型域	26
17.2.1 Greenian domains	26
17.2.2 failure of Green functions	26
17.2.3 $\mathbb{C}$ 的 parabolicity	26
17.2.4 hyperbolic/parabolic distinction	26
17.2.5 与 universal covering 的联系	26
17.3 Green 函数的构造	26
17.3.1 exhaustion	26
17.3.2 Perron method	26
17.3.3 disk and half-plane	26
17.3.4 comparison principles	26
17.4 势论解释	26
17.4.1 Green potentials	26

17.4.2	harmonic measure	26
17.4.3	equilibrium viewpoint	26
17.4.4	capacity 的联系	26
17.5	多连通区域	26
17.5.1	periods	26
17.5.2	harmonic measures	26
17.5.3	obstruction to harmonic conjugates	26
17.5.4	canonical representations	26
第十八章	Poisson–Jensen 公式与零点分布	27
18.1	零点计数	27
18.1.1	multiplicity	27
18.1.2	counting function	27
18.1.3	argument principle revisited	27
18.2	Jensen 公式	27
18.2.1	Jensen formula	27
18.2.2	Poisson–Jensen formula	27
18.2.3	zero-distribution estimates	27
18.3	次调和函数观点	27
18.3.1	$\log f $	27
18.3.2	zeros as Riesz measure	27
18.3.3	potential-theoretic interpretation	27
18.3.4	Nevanlinna theory 的入口	27
第四编	整函数与亚纯函数	29
第十九章	整函数的增长	31
19.1	最大模	31
19.1.1	$M(r, f)$	31
19.1.2	maximum modulus	31
19.1.3	Hadamard three-circles theorem	31
19.1.4	logarithmic convexity	31
19.2	增长阶与型	31
19.2.1	order	31
19.2.2	type	31
19.2.3	basic examples	31
19.2.4	growth of derivatives	31
19.3	零点序列	31
19.3.1	exponent of convergence	31
19.3.2	zero density	31

19.3.3	growth restrictions	31
19.4	Phragmén–Lindelöf 原理	31
19.4.1	sectors	31
19.4.2	growth conditions	31
19.4.3	applications to entire functions	31
19.4.4	uniqueness theorems	31
第二十章	Weierstrass 乘积、Mittag–Leffler 与 Hadamard 分解	32
20.1	无穷乘积	33
20.1.1	convergence criteria	33
20.1.2	absolute convergence	33
20.1.3	normal convergence	33
20.1.4	zeros and products	33
20.2	Weierstrass 典范因子	33
20.2.1	elementary factors	33
20.2.2	canonical factors	33
20.2.3	genus	33
20.3	Weierstrass 乘积定理	33
20.3.1	prescribed zeros	33
20.3.2	canonical products	33
20.3.3	zero sequences	33
20.4	Mittag–Leffler 定理	33
20.4.1	principal parts	33
20.4.2	meromorphic interpolation	33
20.4.3	Mittag–Leffler theorem	33
20.4.4	duality with Weierstrass theorem	33
20.5	Hadamard 分解	33
20.5.1	finite-order entire functions	33
20.5.2	canonical products	33
20.5.3	Hadamard factorization theorem	33
20.5.4	genus and order	33
第二十一章	Γ 函数与 Mellin 方法	34
21.1	Euler Γ 函数	35
21.1.1	Euler integral	35
21.1.2	functional equation	35
21.1.3	log-convexity	35
21.1.4	Bohr–Møllerup theorem	35
21.2	亚纯延拓	35
21.2.1	recurrence	35
21.2.2	poles	35

21.2.3	residues	35
21.3	乘积表示	35
21.3.1	Weierstrass product	35
21.3.2	Euler constant	35
21.3.3	$1/\Gamma$ as an entire function	35
21.4	经典公式	35
21.4.1	reflection formula	35
21.4.2	duplication formula	35
21.4.3	multiplication formula	35
21.4.4	Stirling formula	35
21.5	Mellin 变换	35
21.5.1	definition	35
21.5.2	scaling	35
21.5.3	relation with Gamma	35
21.5.4	Mellin inversion	35
21.5.5	Fourier transform in logarithmic coordinates	35

第五编 椭圆函数、模形式与 θ 函数 37

第二十二章	椭圆函数	39
22.1	格与双周期函数	39
22.1.1	lattices in $\mathbb{C}$	39
22.1.2	fundamental parallelogram	39
22.1.3	doubly periodic functions	39
22.1.4	elliptic functions	39
22.2	椭圆函数的基本结构	39
22.2.1	zeros and poles	39
22.2.2	sum of residues	39
22.2.3	divisor relations	39
22.2.4	degree considerations	39
22.3	Weierstrass $\wp$ 函数	39
22.3.1	definition and convergence	39
22.3.2	$\wp'$	39
22.3.3	differential equation	39
22.3.4	zeros and poles	39
22.4	椭圆曲线的解析表示	39
22.4.1	cubic equation	39
22.4.2	discriminant	39
22.4.3	$\mathbb{C}/\Lambda$	39
22.4.4	analytic uniformization	39

22.4.5	group law 的解释	39
第二十三章 Eisenstein 级数与模形式		40
23.1	模群	41
23.1.1	$SL_2(\mathbf{Z})$	41
23.1.2	$PSL_2(\mathbf{Z})$	41
23.1.3	action on $\mathfrak{H}$	41
23.1.4	fundamental domain	41
23.1.5	cusps	41
23.2	Eisenstein 级数	41
23.2.1	lattice sums	41
23.2.2	convergence	41
23.2.3	G_{2k}	41
23.2.4	relation with $\wp$	41
23.3	模形式	41
23.3.1	modular forms	41
23.3.2	weight	41
23.3.3	cuspidal forms	41
23.3.4	Fourier expansion	41
23.3.5	vanishing at the cusp	41
23.4	E_4, E_6 与判别式	41
23.4.1	normalized Eisenstein series	41
23.4.2	E_4, E_6	41
23.4.3	discriminant modular form	41
23.4.4	relation	41
23.5	价公式与模形式环	41
23.5.1	zeros in the fundamental domain	41
23.5.2	valence formula	41
23.5.3	dimension arguments	41
23.6	模函数与 j -不变量	41
23.6.1	modular functions	41
23.6.2	j -invariant	41
23.6.3	elliptic curves 的分类	41
23.6.4	modular curve $X(1)$ 的几何解释	41
第二十四章 θ 函数与整数平方和		42
24.1	Jacobi θ 函数	43
24.1.1	theta series	43
24.1.2	与第二卷 Poisson 求和的联系	43
24.1.3	modular transformation	43
24.1.4	theta constants	43

24.2 Jacobi 三重积公式	43
24.2.1 triple-product identity	43
24.2.2 product expansions	43
24.2.3 special values	43
24.2.4 q -series	43
24.3 θ 级数作为生成函数	43
24.3.1 generating functions	43
24.3.2 products and convolution	43
24.3.3 coefficient comparison	43
24.4 二平方和与四平方和	43
24.4.1 two-square theorem	43
24.4.2 Jacobi four-square theorem	43
24.4.3 theta-function proof	43
24.4.4 generating-function method	43
24.5* 二次型的 θ 级数	43
24.5.1 positive-definite quadratic forms	43
24.5.2 lattice theta series	43
24.5.3 modularity	43
24.5.4 representation numbers	43

第六编 解析数论: Dirichlet 级数、 ζ 函数与素数定理 45

第二十五章 算术函数与 Dirichlet 级数 47

25.1 算术函数	48
25.1.1 multiplicative functions	48
25.1.2 completely multiplicative functions	48
25.1.3 Möbius function μ	48
25.1.4 Euler function φ	48
25.1.5 divisor functions	48
25.1.6 von Mangoldt function Λ	48
25.2 Dirichlet 卷积	48
25.2.1 definition	48
25.2.2 identity element	48
25.2.3 inverses	48
25.2.4 Möbius inversion	48
25.3 Abel 求和	48
25.3.1 summation by parts	48
25.3.2 partial summation	48
25.3.3 weighted sums	48
25.3.4 integral comparison	48

25.3.5	applications to prime-counting functions	48
25.4	Dirichlet 级数	48
25.4.1	abscissa of convergence	48
25.4.2	absolute convergence	48
25.4.3	multiplication	48
25.4.4	coefficient convolution	48
25.5	Euler 乘积	48
25.5.1	Euler products for multiplicative coefficients	48
25.5.2	uniqueness	48
25.5.3	logarithms of Euler products	48
25.5.4	logarithmic derivatives	48
25.5.5	$\Lambda(n)$ 出现的机制	48
第二十六章	Riemann ζ 函数	49
26.1	Dirichlet 级数与 Euler 乘积	50
26.1.1	convergence for $\Re s > 1$	50
26.1.2	Euler product	50
26.1.3	primes and ζ	50
26.2	Mellin 变换与 θ 函数	50
26.2.1	Mellin transform	50
26.2.2	Gamma function	50
26.2.3	theta function	50
26.2.4	heat-kernel viewpoint	50
26.3	解析延拓	50
26.3.1*	Euler–Maclaurin method	50
26.3.2	theta method	50
26.3.3	meromorphic continuation	50
26.3.4	pole at $s = 1$	50
26.4	函数方程	50
26.4.1	theta transformation	50
26.4.2	completed zeta	50
26.4.3	functional equation	50
26.4.4	symmetry	50
26.5	零点	50
26.5.1	trivial zeros	50
26.5.2	critical strip	50
26.5.3	critical line	50
26.5.4	nontrivial zeros	50
26.5.5	Riemann hypothesis	50
26.6*	ζ 函数与 Hadamard 乘积	50

26.6.1	Riemann ζ -function	50
26.6.2	entire order	50
26.6.3	Hadamard product	50
26.6.4	zero distribution	50
26.6.5	explicit-formula viewpoint	50
第二十七章	素数定理	51
27.1	素数计数函数	52
27.1.1	$\pi(x)$	52
27.1.2	$\vartheta(x)$	52
27.1.3	$\psi(x)$	52
27.1.4	von Mangoldt function	52
27.1.5	basic asymptotic equivalences	52
27.2	ζ 函数与素数	52
27.2.1	logarithmic derivative	52
27.2.2	Euler product	52
27.2.3	explicit-formula philosophy	52
27.3	$\Re s = 1$ 上的无零点性	52
27.3.1	Hadamard–de la Vallée Poussin argument	52
27.3.2	positivity trick	52
27.3.3	boundary estimates	52
27.3.4	exclusion of zeros	52
27.4	Tauber 型方法	52
27.4.1	Abelian versus Tauberian theorems	52
27.4.2	Wiener–Ikehara theorem	52
27.4.3	application to $\psi(x)$	52
27.5	素数定理	52
27.5.1	equivalent formulations	52
27.5.2	relation between error terms and zeros	52
27.6*	Newman 的简化解析证明	52
27.6.1	analytic setup	52
27.6.2	contour argument	52

第一编 基础复分析与正规族

第一章 全纯函数与幂级数

1.1 复可微与全纯

1.1.1 complex derivative

1.1.2 Cauchy–Riemann equations

1.1.3 holomorphic functions

1.1.4 conformality

1.2 幂级数

1.2.1 radius of convergence

1.2.2 termwise differentiation

1.2.3 analytic functions

1.2.4 holomorphic = analytic

1.3 初等全纯函数

1.3.1 exponential

1.3.2 logarithm

1.3.3 trigonometric functions

1.3.4 Möbius transformations

1.4 局部结构

1.4.1 isolated zeros

1.4.2 identity theorem

1.4.3 local inverse theorem

1.4.4 open mapping theorem

第二章 Cauchy 理论

2.1 复曲线积分

2.1.1 piecewise smooth curves

2.1.2 contour integrals

2.1.3 primitives

2.2 Cauchy 积分定理

2.2.1 triangle version

2.2.2 Goursat theorem

2.2.3 simply connected domains

2.2.4 primitive criterion

2.3 Cauchy 积分公式

2.3.1 basic formula

2.3.2 derivative formula

2.3.3 Cauchy estimates

2.4 基本推论

2.4.1 Liouville theorem

2.4.2 fundamental theorem of algebra

2.4.3 maximum modulus principle

2.4.4 Schwarz lemma 初步

第三章 Laurent 级数、奇点与留数

3.1 Laurent 级数

3.1.1 annuli

3.1.2 Laurent expansion

3.1.3 Laurent coefficients

3.2 孤立奇点

3.2.1 removable singularities

3.2.2 poles

3.2.3 essential singularities

3.2.4 Casorati–Weierstrass

3.3 留数

3.3.1 residue

3.3.2 residue theorem

3.3.3 real integrals

3.3.4 point at infinity

3.4 零点计数

3.4.1 argument principle

3.4.2 Rouché theorem

3.4.3 multiplicity

3.4.4 logarithmic derivative

第四章 正规族

4.1 局部一致收敛

4.1.1 compact convergence

4.1.2 holomorphic limits

4.1.3 convergence of derivatives

4.1.4 Weierstrass theorem

4.2 正规族

4.2.1 definition

4.2.2 sequential compactness

4.2.3 spherical metric

4.2.4 meromorphic families

4.3 Montel 定理

4.3.1 locally bounded families

4.3.2 Montel theorem

4.3.3 omitted-value forms

4.4 Hurwitz 定理

4.4.1 stability of zeros

4.4.2 zero-free limits

4.4.3 univalent limits

4.4.4 applications

第二编 共形映射、拓扑、覆盖与双曲几何

第五章 Riemann 映照定理

5.1 单连通区域

5.1.1 simple connectivity

5.1.2 holomorphic logarithms

5.1.3 holomorphic square roots

5.1.4 univalent functions

5.2 极值方法

5.2.1 normalized families

5.2.2 normal-family compactness

5.2.3 extremal function

5.2.4 surjectivity argument

5.3 Riemann 映照定理

5.3.1 existence

5.3.2 uniqueness

5.3.3 automorphisms of the disk

5.3.4 conformal classification

第六章 Schwarz–Pick 理论

6.1 Schwarz 引理

6.1.1 Schwarz lemma

6.1.2 derivative form

6.1.3 equality case

6.1.4 disk automorphisms

6.2 伪双曲距离

6.2.1 pseudohyperbolic distance

6.2.2 Möbius invariance

6.2.3 geometric interpretation

6.3 Schwarz–Pick 引理

6.3.1 differential form

6.3.2 distance contraction

6.3.3 equality case

6.3.4 transfer under conformal maps

第七章 共形映射的边界行为

7.1 横割与素端

7.1.1 cross-cuts

7.1.2 chains

7.1.3 prime ends

7.1.4 prime-end boundary

7.2 Carathéodory 边界对应

7.2.1 Jordan domains

7.2.2 continuous boundary extension

7.2.3 boundary homeomorphism

7.2.4 prime-end formulation

7.3 Schwarz–Christoffel 公式

7.3.1 polygonal domains

7.3.2 interior angles

7.3.3 formula

7.3.4 parameter determination

7.4 矩形与椭圆积分

7.4.1 conformal mapping of rectangles

7.4.2 elliptic integrals

7.4.3 rectangle modulus

7.4.4 special-function connection

第八章 二连通区域与极值长度

8.1 二连通区域

8.1.1 annuli

8.1.2 standard ring domains

8.1.3 classification theorem

8.1.4 conformal invariants

8.2 环域模量

8.2.1 annulus modulus

8.2.2 conformal invariance

8.2.3 monotonicity

8.2.4 degeneration

8.3 极值长度

8.3.1 curve families

8.3.2 admissible metrics

8.3.3 extremal length

8.3.4 annulus computation

8.4 四边形与共形模

8.4.1 quadrilateral

8.4.2 dual curve families

8.4.3 modulus

8.4.4 boundary estimates

8.4.5 quasiconformal viewpoint

第九章 基本群与解析延拓

9.1 曲线与同伦

9.1.1 paths

9.1.2 homotopy

9.1.3 fundamental group

9.1.4 winding

9.2 函数芽与解析延拓

9.2.1 germs

9.2.2 continuation along paths

9.2.3 uniqueness

9.2.4 maximal analytic continuation

9.3 单值性

9.3.1 homotopy invariance

9.3.2 monodromy theorem

9.3.3 multivalued functions

9.3.4 $\log z$ 、 z^α 与 inverse functions

第十章 Cauchy 定理的拓扑形式

10.1 指数与绕数

10.1.1 index

10.1.2 homotopy invariance

10.1.3 index and contour integrals

10.2 同伦形式的 Cauchy 定理

10.2.1 homotopic curves

10.2.2 Cauchy integral theorem

10.2.3 primitive criterion

10.3 同调形式

10.3.1 cycles

10.3.2 homology

10.3.3 null-homologous cycles

10.3.4 topological residue theorem

第十一章 覆盖空间与全纯覆盖

11.1 覆盖映射

11.1.1 covering maps

11.1.2 path lifting

11.1.3 homotopy lifting

11.1.4 deck transformations

11.2 全纯覆盖

11.2.1 holomorphic coverings

11.2.2 exponential map

11.2.3 coverings of punctured domains

11.2.4 distinction from branched coverings

11.3 万有覆盖

11.3.1 universal covering

11.3.2 fundamental-group action

11.3.3 deck group

11.3.4 Riemann-surface viewpoint

11.4 上半平面与模群预告

11.4.1 upper half-plane

11.4.2 Möbius transformations

11.4.3 $PSL_2(\mathbb{R})$

11.4.4 $PSL_2(\mathbb{Z})$

第十二章* 统一化定理与共形类型

12.1 单连通 Riemann 曲面

12.1.1 sphere

12.1.2 plane

12.1.3 disk

12.1.4 三种基本模型

12.2 统一化定理

12.2.1 theorem statement

12.2.2 simply connected form

12.2.3 universal-cover form

12.2.4 uniqueness of conformal type

12.3 双曲型、抛物型与椭圆型

12.3.1 conformal type

12.3.2 universal covering

12.3.3 examples

12.3.4 punctures and compact surfaces

12.4 平面域的统一化

12.4.1 hyperbolic plane domains

12.4.2 exceptional parabolic cases

12.4.3 Poincaré metric construction

12.4.4 后续章节所需的统一化结论

第十三章 Poincaré 度量与双曲几何

13.1 圆盘上的 Poincaré 度量

- 13.1.1 metric element
- 13.1.2 Möbius invariance
- 13.1.3 Poincaré distance
- 13.1.4 Schwarz–Pick as contraction

13.2 双曲测地线

- 13.2.1 geodesics
- 13.2.2 completeness
- 13.2.3 constant negative curvature
- 13.2.4 isometries

13.3 圆盘与上半平面模型

- 13.3.1 disk model
- 13.3.2 half-plane model
- 13.3.3 Cayley transform
- 13.3.4 boundary at infinity

13.4 一般双曲 Riemann 曲面

- 13.4.1 pullback from universal cover
- 13.4.2 hyperbolic domains
- 13.4.3 conformal invariance
- 13.4.4 monotonicity
- 13.4.5 completeness

第十四章 Ahlfors–Schwarz 引理与 Picard 定理

14.1 共形度量

14.1.1 conformal metric

14.1.2 Gaussian curvature

14.1.3 pullback metric

14.1.4 completeness

14.2 Ahlfors–Schwarz 引理

14.2.1 curvature comparison

14.2.2 Schwarz–Pick generalization

14.2.3 complete-metric form

14.3 正规族与省略值

14.3.1 omitted values

14.3.2 normality

14.3.3 compactness

14.3.4 generalized Montel theorem

14.4 Picard 小定理

14.4.1 covering-space proof

14.4.2 omitted values

14.4.3 applications

14.5 Picard 大定理

14.5.1 essential singularities

14.5.2 big Picard theorem

14.5.3 comparison with Casorati–Weierstrass

14.6* 曲率方法

14.6.1 nonexistence of negative-curvature metrics on $\mathbb{C}$

第三编 调和函数与势论

第十五章 调和函数与次调和函数

15.1 调和函数

15.1.1 Laplace equation

15.1.2 mean-value property

15.1.3 maximum principle

15.1.4 Harnack inequality

15.2 调和共轭

15.2.1 Cauchy–Riemann equations

15.2.2 local harmonic conjugate

15.2.3 simply connected domains

15.2.4 holomorphic functions

15.3 次调和函数

15.3.1 subharmonic functions

15.3.2 mean-value inequality

15.3.3 maximum principle

15.3.4 $\log |f|$

15.4 分布观点

15.4.1 distributional Laplacian

15.4.2 positive distributions

15.4.3 Riesz measure

15.4.4 potential-theoretic interpretation

第十六章 Dirichlet 问题与 Perron 方法

16.1 Dirichlet 问题

16.1.1 boundary-value problem

16.1.2 disk Poisson kernel

16.1.3 Poisson integral

16.1.4 harmonic measure

16.2 Perron 方法

16.2.1 subfunctions

16.2.2 Perron family

16.2.3 Perron solution

16.2.4 uniqueness

16.3 边界正则性

16.3.1 barriers

16.3.2 regular boundary points

16.3.3 exterior cone condition

16.3.4 Wiener criterion 概览

16.4 调和测度

16.4.1 representation of solutions

16.4.2 conformal invariance

16.4.3 probabilistic interpretation 的预告

第十七章 Green 函数、Green 域与多连通区域

17.1 Green 函数

17.1.1 definition

17.1.2 uniqueness

17.1.3 symmetry

17.1.4 conformal invariance

17.2 Green 域与抛物型域

17.2.1 Greenian domains

17.2.2 failure of Green functions

17.2.3 $\mathbb{C}$ 的 parabolicity

17.2.4 hyperbolic/parabolic distinction

17.2.5 与 universal covering 的联系

17.3 Green 函数的构造

17.3.1 exhaustion

17.3.2 Perron method

17.3.3 disk and half-plane

17.3.4 comparison principles

17.4 势论解释

17.4.1 Green potentials

17.4.2 harmonic measure

17.4.3 equilibrium viewpoint

17.4.4 capacity 的联系

17.5 多连通区域

17.5.1 periods

17.5.2 harmonic measures

第十八章 Poisson–Jensen 公式与零点分布

18.1 零点计数

18.1.1 multiplicity

18.1.2 counting function

18.1.3 argument principle revisited

18.2 Jensen 公式

18.2.1 Jensen formula

18.2.2 Poisson–Jensen formula

18.2.3 zero-distribution estimates

18.3 次调和函数观点

18.3.1 $\log |f|$

18.3.2 zeros as Riesz measure

18.3.3 potential-theoretic interpretation

18.3.4 Nevanlinna theory 的入口

第四编 整函数与亚纯函数

第十九章 整函数的增长

19.1 最大模

19.1.1 $M(r, f)$

19.1.2 maximum modulus

19.1.3 Hadamard three-circles theorem

19.1.4 logarithmic convexity

19.2 增长阶与型

19.2.1 order

19.2.2 type

19.2.3 basic examples

19.2.4 growth of derivatives

19.3 零点序列

19.3.1 exponent of convergence

19.3.2 zero density

19.3.3 growth restrictions

19.4 Phragmén–Lindelöf 原理

19.4.1 sectors

19.4.2 growth conditions

19.4.3 applications to entire functions

19.4.4 uniqueness theorems

第二十章 Weierstrass 乘积、Mittag-Leffler 与 Hadamard 分解

20.1 无穷乘积

20.1.1 convergence criteria

20.1.2 absolute convergence

20.1.3 normal convergence

20.1.4 zeros and products

20.2 Weierstrass 典范因子

20.2.1 elementary factors

20.2.2 canonical factors

20.2.3 genus

20.3 Weierstrass 乘积定理

20.3.1 prescribed zeros

20.3.2 canonical products

20.3.3 zero sequences

20.4 Mittag-Leffler 定理

20.4.1 principal parts

20.4.2 meromorphic interpolation

20.4.3 Mittag-Leffler theorem

20.4.4 duality with Weierstrass theorem

20.5 Hadamard 分解

20.5.1 finite-order entire functions

20.5.2 canonical products

20.5.3 Hadamard factorization theorem

20.5.4 genus and order

第二十一章 Γ 函数与 Mellin 方法

21.1 Euler Γ 函数

21.1.1 Euler integral

21.1.2 functional equation

21.1.3 log-convexity

21.1.4 Bohr–Mollerup theorem

21.2 亚纯延拓

21.2.1 recurrence

21.2.2 poles

21.2.3 residues

21.3 乘积表示

21.3.1 Weierstrass product

21.3.2 Euler constant

21.3.3 $1/\Gamma$ as an entire function

21.4 经典公式

21.4.1 reflection formula

21.4.2 duplication formula

21.4.3 multiplication formula

21.4.4 Stirling formula

21.5 Mellin 变换

21.5.1 definition

21.5.2 scaling

21.5.3 relation with Gamma

21.5.4 Mellin inversion

21.5.5 Fourier transform in logarithmic coordinates

第五编 椭圆函数、模形式与 θ 函数

第二十二章 椭圆函数

22.1 格与双周期函数

22.1.1 lattices in $\mathbb{C}$

22.1.2 fundamental parallelogram

22.1.3 doubly periodic functions

22.1.4 elliptic functions

22.2 椭圆函数的基本结构

22.2.1 zeros and poles

22.2.2 sum of residues

22.2.3 divisor relations

22.2.4 degree considerations

22.3 Weierstrass $\wp$ 函数

22.3.1 definition and convergence

22.3.2 $\wp'$

22.3.3 differential equation

22.3.4 zeros and poles

22.4 椭圆曲线的解析表示

22.4.1 cubic equation

22.4.2 discriminant

22.4.3 $\mathbb{C}/\Lambda$

22.4.4 analytic uniformization

22.4.5 group law 的解释

第二十三章 Eisenstein 级数与模形式

23.1 模群

23.1.1 $SL_2(\mathbb{Z})$

23.1.2 $PSL_2(\mathbb{Z})$

23.1.3 action on $\mathfrak{H}$

23.1.4 fundamental domain

23.1.5 cusps

23.2 Eisenstein 级数

23.2.1 lattice sums

23.2.2 convergence

23.2.3 G_{2k}

23.2.4 relation with $\wp$

23.3 模形式

23.3.1 modular forms

23.3.2 weight

23.3.3 cusp forms

23.3.4 Fourier expansion

23.3.5 vanishing at the cusp

23.4 E_4, E_6 与判别式

23.4.1 normalized Eisenstein series

23.4.2 E_4, E_6

23.4.3 discriminant modular form

23.4.4 relation

23.5 价公式与模形式环

23.5.1 zeros in the fundamental domain

23.5.2 valence formula

23.5.3 Dirichlet character

第二十四章 θ 函数与整数平方和

24.1 Jacobi θ 函数

24.1.1 theta series

24.1.2 与第二卷 Poisson 求和的联系

24.1.3 modular transformation

24.1.4 theta constants

24.2 Jacobi 三重积公式

24.2.1 triple-product identity

24.2.2 product expansions

24.2.3 special values

24.2.4 q -series

24.3 θ 级数作为生成函数

24.3.1 generating functions

24.3.2 products and convolution

24.3.3 coefficient comparison

24.4 二平方和与四平方和

24.4.1 two-square theorem

24.4.2 Jacobi four-square theorem

24.4.3 theta-function proof

24.4.4 generating-function method

24.5* 二次型的 θ 级数

24.5.1 positive-definite quadratic forms

24.5.2 lattice theta series

24.5.3 modularity

24.5.4 representation numbers

第六编 解析数论：Dirichlet 级数、 ζ 函数与素数定理

第二十五章 算术函数与 Dirichlet 级数

25.1 算术函数

25.1.1 multiplicative functions

25.1.2 completely multiplicative functions

25.1.3 Möbius function μ

25.1.4 Euler function φ

25.1.5 divisor functions

25.1.6 von Mangoldt function Λ

25.2 Dirichlet 卷积

25.2.1 definition

25.2.2 identity element

25.2.3 inverses

25.2.4 Möbius inversion

25.3 Abel 求和

25.3.1 summation by parts

25.3.2 partial summation

25.3.3 weighted sums

25.3.4 integral comparison

25.3.5 applications to prime-counting functions

25.4 Dirichlet 级数

25.4.1 abscissa of convergence

25.4.2 absolute convergence

25.4.3 multiplication

25.4.4 coefficient convolution

25.5 Euler 乘积

第二十六章 Riemann ζ 函数

26.1 Dirichlet 级数与 Euler 乘积

26.1.1 convergence for $\Re s > 1$

26.1.2 Euler product

26.1.3 primes and ζ

26.2 Mellin 变换与 θ 函数

26.2.1 Mellin transform

26.2.2 Gamma function

26.2.3 theta function

26.2.4 heat-kernel viewpoint

26.3 解析延拓

26.3.1* Euler–Maclaurin method

26.3.2 theta method

26.3.3 meromorphic continuation

26.3.4 pole at $s = 1$

26.4 函数方程

26.4.1 theta transformation

26.4.2 completed zeta

26.4.3 functional equation

26.4.4 symmetry

26.5 零点

26.5.1 trivial zeros

26.5.2 critical strip

26.5.3 critical line

26.5.4 nontrivial zeros

26.5.5 Riemann hypothesis

* 关于解析延拓的更详细讨论，见第 27 章。

第二十七章 素数定理

27.1 素数计数函数

27.1.1 $\pi(x)$

27.1.2 $\vartheta(x)$

27.1.3 $\psi(x)$

27.1.4 von Mangoldt function

27.1.5 basic asymptotic equivalences

27.2 ζ 函数与素数

27.2.1 logarithmic derivative

27.2.2 Euler product

27.2.3 explicit-formula philosophy

27.3 $\Re s = 1$ 上的无零点性

27.3.1 Hadamard–de la Vallée Poussin argument

27.3.2 positivity trick

27.3.3 boundary estimates

27.3.4 exclusion of zeros

27.4 Tauber 型方法

27.4.1 Abelian versus Tauberian theorems

27.4.2 Wiener–Ikehara theorem

27.4.3 application to $\psi(x)$

27.5 素数定理

27.5.1 equivalent formulations

27.5.2 relation between error terms and zeros

27.6* Newman 的简化解析证明

27.6.1 analytic setup

27.6.2 contour argument

附录

附录 A3 Riemann 曲面与代数曲线基础

附录 B3 拟共形映射与 Teichmüller 理论人口

附录 C3 Nevanlinna 理论

附录 D3 Dirichlet L -函数与算术级数

附录 E3 自守形式与 L -函数

附录 F3 特殊函数补充
